

Tier Lampshade Making Kit

What's in this Box

- 1 x Utility ring (connects to lamp-holder)
- 1 x Connection ring
- 2 x Plain rings
- 2 x Self-adhesive lampshade panels
- 1 x 6mtr roll self-adhesive tape
- 3 x Rolled Edge tool for finishing
- 1 x Diffuser
- 1 x Instruction sheet (this doc)

Preparation - You will need

- * Covering of choice
- * Clean flat working area
- * Sharp Knife or Scissors

Recommended (not essential)

- * Seam Roller

Instructions

Make the Large Lampshade

1. Cut down your covering to a workable size. Place face down and position the large panel on top and make sure it fits within covering.

Tip! Iron covering to remove any creases.

2. Peel back some of the release paper and stick down on your covering. Smooth out from the middle and press the adhesive into the fabric firmly.

Tip! Use a weight (tin) to stop panel moving!

3. When complete and inspected, cut off surplus covering by running a sharp knife all round the edges of the panel or use scissors.

4. Snap back the creased edges (kiss cut) around the panel to break the edge of the PVC.

5. Carefully, to avoid fraying, remove the broken strips of PVC to leave your covering's edge.

6. Apply double-sided tape to the PVC panel edge. This will be used to stick the seam.

7. Remove the release paper and your panel is now complete and ready for attaching to the rings.

8. Apply double-sided tape to utility(A) and connection ring(B). Keep tape in line with the centre.

9. Press the tape down evenly and firmly into the wire.

10. Remove the release paper and you have sticky rings to fix to the panel.

Important

If your covering is directional you need to think about which ring to place at the top or bottom of the panel. The utility ring (A) needs to be placed at the Top and the connection ring (B) needs to be placed at the bottom so check to make sure your covering is the correct way before continuing to the next step.

11. Place the rings on the PVC edge and start to roll towards the seam edge (Pic 7).

The utility ring (A) needs to be placed inwards and the connection ring hooks (B) facing out. These hooks will grip onto the lampshade underneath.

Tip! Ask someone to help you roll the rings.

12. Roll towards you and keep the rings in-line with the PVC edge at all times. If you run out of line simply go back and correct.

When you get to the seam (the overlap Pic 7) press the tape together from the centre out.

13. Turn over so the seam is now on a hard surface and apply firm pressure pressing the tape down with your hand or use a seam roller.

14. Snip the covering in line with the struts on the utility and connection rings so that the covering can be folded behind.

15. Pinch the fabric, pull taut and fold onto the sticky rings working your way round the lampshade.

16. Use the finishing tool to push the fabric behind the rings. Force the tool between the gap and swipe around the circumference until you're happy with the finish.

Make the Small Lampshade

17. Cut down your covering to a workable size. Place face down and position the small panel on top and make sure it fits within the covering.

18. Repeat steps 2, 3, 4, 5, 6, 7, to laminate your covering, trim surplus, remove kiss cut PVC edge and then prepare the seam with D/S tape.

19. Apply double-sided tape to both plain rings, same steps as 9,10

20. Roll the rings onto the panel keep the rings in-line with the PVC edge at all times, steps 11,12.

21. When you get to the seam/overlap, join with tape and press together, same as step 13.

22. Repeat steps 15,16 to fold in your covering and finish using the rolled edge tool.

23. If the tool gets worn, cut with scissors to refresh.

24. Both lampshades are now complete and can be joined together.

25. Fit the diffuser to the small shade, it sits on the lip of the bottom ring.

26. Place the small shade on top of the larger shade's hooks and pull the top ring over the hooks to grip.

27. Your Tier Lampshade is now complete and ready to install with your pendant fitting.

Tip! Line up seams so they are both in-line.

Bulb Advice! We recommend using low energy bulbs with all lampshades.
